

— one level-05 world ○ survival plateau ◆ lag, May seed
 ● wake point (headline rule) ● lag, level-05 world ■ main-network weight norm: descriptive control — not registered

evidence status: b2_wakeup — "wake-up timing — 16 level-05 worlds (one seed each) + 3 May-replication seeds"; verdict words come only from decision_rules.evaluate.*
 decision rules sha256 5ef6f731d15e @ 47b91611
 Registered per-run caveat: Descriptive only. No single run's wake point counts as evidence that a measure changed: the registered guard (noise_k = 3, noise SD estimated from the curve's own end) passes a curve that does not change with probability 0.256 % (51 points), 0.259 % (50 points), 1.78 % (16 points), 1.77 % (15 points). About 1.6 (independent noise) to 4.3 (AR(1) noise, phi 0.3) false wake points are expected across the 323 headline curves from noise alone; the stated target was below 0.1 (not met). Only the across-worlds sign test over the 16 level-05 worlds carries a reading; the 3 May seeds stay descriptive. Values from b2_family_bound in the wake-up manifest.
