

TOOL VALIDATION — SHARED SEED 42 — NOT EVIDENCE

control	registered in	bound	ordinary	modulated
Self-replay: action agreement on the agent's own store	gate G1	≥ 1	1	1
Aligned rows: logits' action = next stored action	gate G3	≥ 1	1	1
same, action-change rows only	gate G3	≥ 1	1	1
Shifted by one row (must NOT agree)	gate G3	< 0.95	0.5105	0.5163
same, action-change rows only	tool check	< 0.05	0	0
Layer capture rebuilds the outputs: max rel. deviation	gate G2	$\leq 1.0\text{e-}05$	4.9e-06	4.6e-06
Sampled rows = full replay: max rel. deviation	tool check	≤ 0.001	4.3e-06	1.2e-05
same, rows planted one step off (must fail)	tool check	> 0.001	0.4603	0.4641
Same agent vs itself: similarity – 1 , worst layer	tool check	$\leq 1.0\text{e-}12$	0	0
Hunger read from the raw input (probe-wide)	gate G4	≥ 0.99	0.992	0.992
Shuffled targets, worst quantity (probe-wide)	gate G4	≤ 0.02	0.0168	0.0168

evidence status: pilot — "tool validation — the two agents share seed 42; not evidence"; no verdict is drawn
decision rules sha256 4c8508af14b6 @ 872b0e04 — computed under the rules before the 2026-09-30 revision (P1_rare_predictor_columns, P2_predictivity_gain_invariance_wording); reported with that sha, as the revision requires. The current rules file is 5ef6f731d15e.
Agents: ordinary_s42 and modulated_s42 (level-05 world w0000). Probe-wide rows are one number for the probe, repeated in both columns.
