

Replace the brain's cells one by one with artificial parts that do the same job

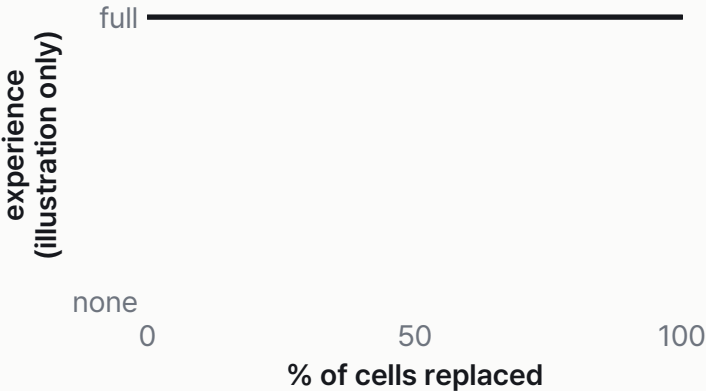

● living neuron ■ artificial part doing the same job

Behaviour is the same at every stage. What about experience?

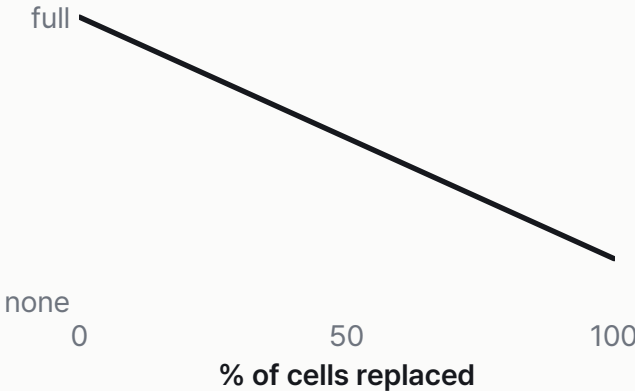

A. Experience stays the same

The conclusion the argument aims at: the copy feels what the original felt.

B. Experience fades slowly

'Fading qualia': the person still says 'bright red' while seeing pale pink.

C. Experience stops at one step

Then someone must name the single cell whose replacement switched it off.
